

About EPI in Pancreatic Cancer

Pancreatic Cancer Overview

Pancreatic cancer is the **3rd leading** cause of cancer-related death in the United States¹ and is projected to be **2nd** (behind lung cancer) by 2030²

The majority of **pancreatic tumors** are **exocrine**, most of which are **adenocarcinomas**³

Estimated incidence in the US: **66,440 cases**⁴

Represents **3.3%** of all new cancer cases⁴

Incidence: **13.5** per **100,000** based on 2017–2021 cases⁴

Mortality: **11.2** per **100,000** based on 2018–2022 deaths⁴

Etiologies of EPI in Pancreatic Cancer

Obstruction of **pancreatic duct** by tumors⁵

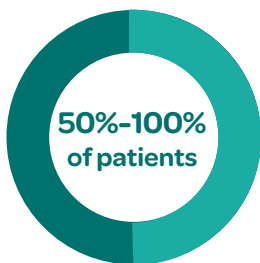

Pancreatic **atrophy** or **fibrosis** secondary to tumor(s)⁶

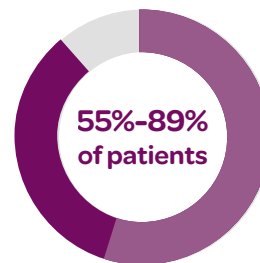

Complications of pancreatic resection^{6,7}

- Reduction of **glandular tissue**
- **Fibrosis** in the remaining pancreatic remnant
- **Alteration** of pancreatic anatomy
- Extensive **denervation** following lymph node dissection

Incidence of EPI in Pancreatic Cancer

with **unresectable pancreatic cancer** have EPI^{8,9}

with **resectable pancreatic cancer** have EPI after surgery^{10,11}
